

**Innovative solutions
inspired by Nature**

Strong technology core for hit identification & development

Food & Beverage

Human & Animal Health

Fragrance & Cosmetics

Crop Protection

Microbial strains

~ 90.000 strains

Genomic DNAs

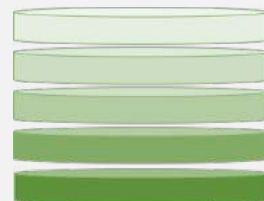

from 25.000 strains

Core assets

NatPure library

~ 15.000 pure compounds

Bioprofiling database

- biological data on pure compounds and extracts / fractions
- correlation of chemical structures with biological activity

Extracts library

~ 38.000 samples from bacteria, fungi, plants, edible plants/fungi

PreFrac library

~ 63.000 samples from microbial strains

Metabolite fingerprints

from 16.000 extracts

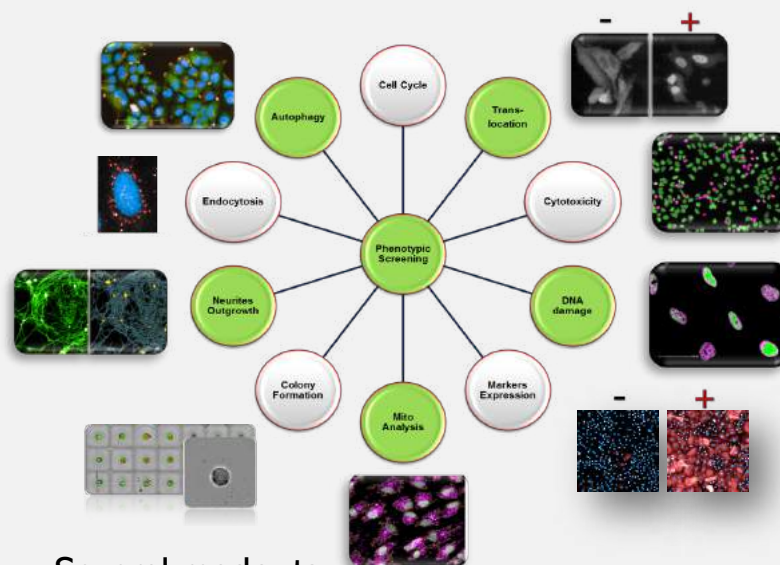

High Throughput Screening

- Luminescence (flash, glow)
- Fluorescence (intensity, FP, TR-FRET)
- Absorbance and other (e.g. AlphaScreen)
- TaqMan
- HTS
- Radiometric screening

Technology platforms

High Content Screening

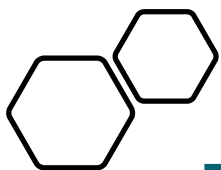

- Several readouts
- Multiparameter
- Customizable

NP Chemistry & Scale-up

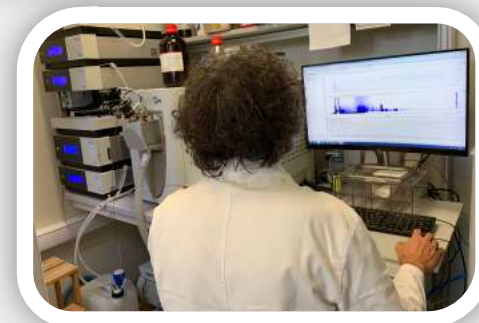

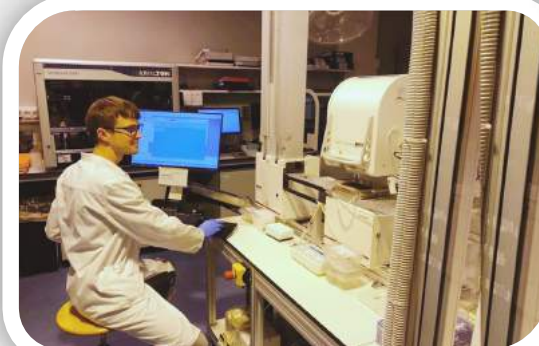

- LC-MS
- HPLCs & MPLCs
- NMR
- Rotary incubators
- Fermentors up to 15 L scale

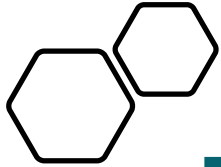

Technical skills

We are an experienced team with expertise in:

- Strain isolation, cultivation and manipulation
- Natural product chemistry; semi-synthesis
- Genomics and metabolomics
- Process development
- Master Cell Bank preparation
- Functional assay development, optimized for compound testing
- High Throughput Screening and High Content Screening

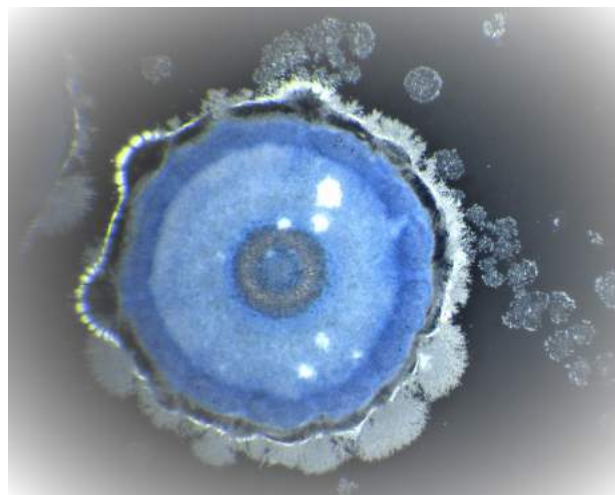

Business model

- Flexible business model and service agreements to meet customers' needs
- Partnership agreements for full discovery and development programs
- Licensing opportunities in different fields:
 - ✓ Human and Animal Health
 - ✓ Crop Protection
 - ✓ Food & Flavors
 - ✓ Cosmetics
